

NOW WITH

Create compelling and professional reports with powerful new TripleFusion, Picture in Picture, and the latest Microsoft operating system and Word compatibility.

- > Fully Integrated with Microsoft® Word®
- > Flexible Report Design and Layout
- > Powerful Temperature Analysis
- > Wizard-guided Report Generation
- > Picture in Picture (Movable, Sizable, Scalable)
- > Automatic Report Generation by Drag and Drop
- > Predictive Trending Functionality
- > Automatically Adds GPS Coordinates to Images.

New! TripleFusion Capabilities

FLIR Reporter 8.3 offers brand-new, Picture in Picture (PIP) features to make your reporting easy and efficient. Simply download infrared and visible light images to Reporter 8.3. Easy-to-use dialog boxes and drag-and-drop features help you superimpose a smaller IR image inside the visible light photo. You can even move and size the PIP anywhere in the photo to show the level of detail that's right for your report.

Reporter 8.3 also has exclusive interval and blending fusion to help you make your images more discernible and compelling.

Painless, Automatic Report Generation

Infrared survey companies, consultants, and end-users depend on quality reporting to build a competitive advantage. FLIR Reporter 8.3 makes it easy to create customized reports, such as insertion of logos—a benefit to consultants. Reporter 8.3 features a Report Wizard that guides you step-by-step through the process of adding images and text, making report creation quick and easy. The Wizard automatically combines all IR inspection data—thermal and visual images, temperature measurements, and text notes—into crisp, professional, easy-to-interpret maintenance reports. If you have to leave your PC before the report is completed, you can save the incomplete report and come back to finish it later. The Rapid Report Manager enables you to create desktop icons based on predefined report templates. To create infrared inspection reports in a single step, simply drag image files onto the Rapid Report Manager™ icon on the desktop and a report is immediately generated.

Compatible with GPS and a Wide Variety of Image Formats

Reporter 8.3 supports the image formats for FLIR's newest infrared cameras as well as for many of our older models. For example, FLIR P660/B660/SC660 customers have built-in GPS capability with their cameras. Reporter 8.3 software automatically adds the GPS coordinates to your report. Click on the Google™ Maps icon in your Reporter 8.3 image and navigate to the Google Maps satellite picture to get detailed maps, directions, longitude, latitude, and altitude readings.

Windows®-based

Reporter 8.3 makes it easy to create custom templates inside Microsoft Word to automate your reporting needs. The user has access to all of the familiar formatting and template tools and other powerful features built into Word, including spell check. Reporter 8.3 integrates powerful and intuitive infrared image analysis and report generation tools for extremely fast, convenient evaluation of infrared inspection results.

Powerful Decision Support

Trending is a powerful tool to help you track thermal information relating to your IR surveys. Armed with this information you can better determine when maintenance procedures need to be performed.

Advanced Features

To maximize the value of your reports, Reporter 8.3 includes numerous advanced features, including: digital zoom, color palette changes, and automatic conversion of any report to Adobe .pdf format. You can play back voice comments recorded in the field on some cameras as you review your field information. Automate calculations with the powerful formula tool and the time-saving one-click ΔT function. Create a report summary instantly with the Summary Table tool. Select the new histogram and line profile graph features to facilitate more advanced analysis. You can even play back sequence files created by the S65 and P65 cameras and FLIR Researcher Professional software—right in the report. There's never been a more powerful, easier to use report generating tool than Reporter 8.3.

System Requirements

Operating Systems

Windows® 2000 with SP4
Windows® XP Home/Pro with SP2 or later
Window Vista or Windows Vista with Service Pack 1

Installed Software

Microsoft® Microsoft Office 2003 with SP2
Office 2003 with Word and SP3
Office 2007 with Word and SP1
Internet functionality required for automatic web updates

Hardware (minimum)

Intel Pentium, MID, Core Duo or better, 2GHz,
1024 MB or more memory, 300 MB of available
hard-disk space, Super VGA (1024x768)
resolution monitor

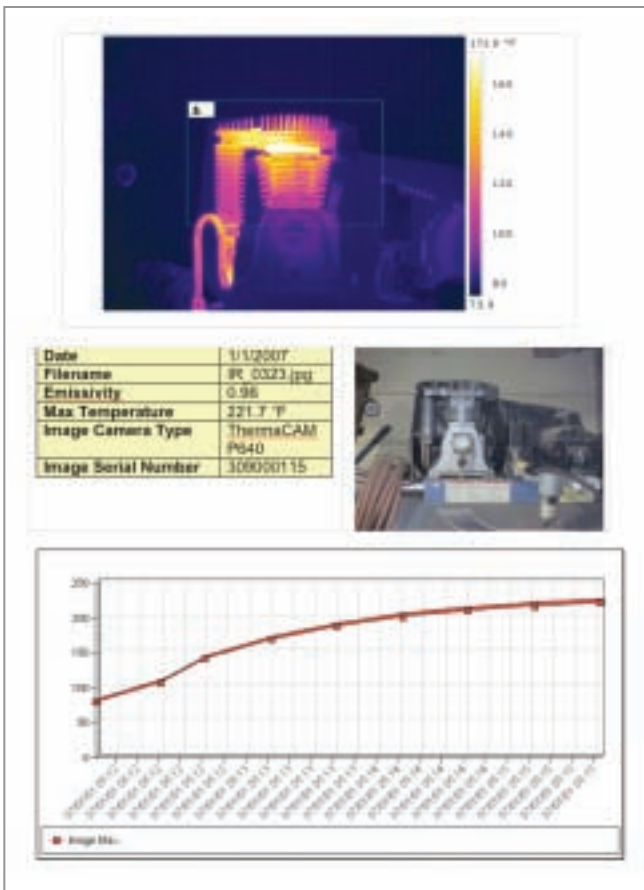

FLIR Reporter 8.3 Software

Large facilities with insulation deficiencies can be a huge heat drain. Picture in Picture makes it easy to describe energy waste. In this example PIP shows a gymnasium wall that needs to be checked for insulation deficiency.

PIP makes it easy to document the location of potential trouble. In this scene, a compressor motor with a hot spot is shown.

Trends: Accurately track thermal performance over time with easy-to-understand charts and graphs.

Reporter 8.3 supports the new embedded GPS feature in FLIR's new P660, B660, and SC660 cameras. Downloaded images contain GPS coordinates, which can be entered in reports. By clicking the icon, you can see a satellite image, get address information, even street directions to add to your report if needed. (The green arrow shows the FLIR camera position).
